sesquiterpene cyclase (BC 2.5.1.-) - pepper
C;Species: Capsicum annuum (pepper)
C;Species: Capsicum annuum (pepper)
C;Species: Capsicum annuum (pepper)
C;Accession: 104174
R;Back, K.; Shin, D.H.; He, S.
Plant Cell Physiol. 39, 899-904, 1998
A;Title: Cloning and bacterial expression of sesquiterpene cyclase, a key branch point er A;Reference number: 216395; MUD:99033462; PMID:9816674
A;Reference number: 216395; MUD:99033462; PMID:9816674
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Status: preliminary
A;Nolecule type: mRNA
A;Status: 1559 <ABAC>
A;Cross-references: EMBL:AF061285; NID:93108342; PIDN:AAC61260.1; PID:93108343
C;Function:
A;Pathway: the synthesis of phytoalexin capsidiol
A;Note: unduced by uv vetispiradiene synthese 1
C;Superfamily: vetispiradiene synthese; transferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          15;

Goerhardt B.;
Thesis (2001), Technische Universitaet Berlin, Germany.
-!- FUNCTION: Catalyzes the cyclization of the ubiquitous isoprenoid
-intermediate geranylgeranyl diphosphate to taxa-4,11-diene, the
parent olefin with a taxane skeleton.
-!- CATALYTIC ACTIVITY: Geranylgeranyl diphosphate = taxa-4,11-diene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

"Cloning, expression, and characterization of taxadiene synthase, a
diteroene cyclase from Taxus chanses.";
Submitted (AUG-2000) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: Catalyzes the cyclization of the ubiquitous isoprenoid
intermediate geranylgeranyl diphosphate to taxa-4,11-diene, the
parent olefin with a taxane skeleton.
--- CATALYTIC ACTIVITY: Geranylgeranyl diphosphate = taxa-4,11-diene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-FEB-2003 (Rel. 41, Created)

    -1- PATHWAY: Taxol biosynthesis; first step.
    -1- SIMILARITY: Belongs to the terpene synthase family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           B35 BY SIMILARITY.

FUNCTION: Involved in defensive oleoresin formation in conifers in response to insect attack or other injury. Involved in monoterpene (C10) olefins blosynthesis.

CATALYTIC ACTIVITY: Geranyl diphosphate = limonene + diphosphate.

COFACTOR: Manganese and potassium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       225 PLDLFERLWAVDTVERLGIDRYFKKEIKESLDYVYRYWDAERGVGWARCNPIPDVDDTAM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (C10) olefins blosynthesis.
--- CATALYTIC ACTIVITY: Geranyl diphosphate = myrcene + diphosphate.
--- COFACTOR: Manganese and potassium.
--- PATHWAY: Oleoresinosis.
--- SUBCELLULAR LOCATION: Chloroplast.
--- INDUCTION: By wounding.
--- SIMILARITY: Belongs to the terpene synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Abies grandis (Grand fir).

synthage: a catalyst for cotton phytoalexin biosynthesis.";
Arch. Blochem. Blophys. 324:255-266(1995).
-!- FUNCTION: Responsible for the cyclization of trans, trans-farnesyl diphosphate (FPP) to (+)-delta cadinene.
-!- CATALYTIC ACTIVITY: 2-trans, 6-trans-farnesyl diphosphate = (+)-delta-cadinene + diphosphate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ERLWAVDTVERLGIDRYFKKEIKESLDYVY-RYWDAERGVGWARCNPIPDVDDTAMGLRI

Cloning, expression, and characterization of (+)-delta-cadinene synthage: a catalyst for cotton phytoalexin biosynthesis.";

Arch. Biochem. Blophys. 324-255-266(1995).

I. FUNCTION: Responsible for the cyclization of trans, trans-farnesyl diphosphate (FPP) to (+)-delta cadinene.

CAPALYTIC ACTIVITY: 2-trans, 6-trans-farnesyl diphosphate = (+)-delta-cadinene + diphosphate.

I. PATHWAY: Phytoalexing gossypol and lacinilene C biosynthesis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               345 AKTPTTNHLONALAKNNAFDKWAVKKDLPGEVEYAIKYPWHRSMPRLEARSYIEQFGSND

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š
                                                                                                                                 This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bloinformatics and the EMBL outstation the Buropean Bloinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
-i- CATALYTIC ACTIVITY: Trans, trans-farnesyl diphosphate aristolochene + diphosphate.
-i- COFACTOR: Binds 3 magnesium ions per subunit.
-i- SUBUNIT: Monomer.
-i- SUBCELLULAR LOCATION: Cytoplasmic.
-i- INDUCTION: By fungal elicitor.
-i- SIMILARITY: Belongs to the terpene synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PROTON ACCEPTOR

Choiling and heterologous expression of a second (+)-delta-cadinene synthase from Gossypium arboreum.";
J. Nat. Prod. 59:944-951(1996).
-I- FUNCTION: Responsible for the cyclization of trans, trans-farnesy diphosphate (FPP) to (+)-delta cadinene.
-I- CATALYTIC ACTIVITY: 2-trans,6-trans-farnesyl diphosphate = (+)-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -1- PATHWAY: Phytoalexing gossypol and lacinilene C biosynthesis;

"Purification of (+)-delta-cadinene synthase, a sesquiterpene cyclase from bacteria-inoculated cotton foliar tissue.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Phytochemistry 41:1044-1055(1996).

-I- FUNCTION: Responsible for the cyclization of trans, trans-farnesyl diphosphate (FPP) to (+)-delta cadinene.

-I- CATALYTIC ACTIVITY: 2-trans, 6-trans-farnesyl diphosphate = (+)-delta-cadinene + diphosphate.
                                                                                                                                                                                                                                                                                                                                                           Bukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta,

                                                                                                                                                                                                                                               diphosphate.
--- SUBCELLULAR LOCATION: Chloroplast.
--- INDUCTION: By oligogalacturonide fragments released by fungal infection. Detected after 5 h of incubation with the pectic fragments and reaches a maximum after 10-12 h.
--- RISCELLANBOUS: The Km of this enzyme is 1.9 micromol.
--- SIMILARITY: Belongs to the terpene synthase family.
--- CAUTION: It is uncertain whether Met-1 or Met-8 is the initiator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            69;
